WEB ENGINEER

WEB ENGINEER WHO LOVES ALL THINGS LARAVEL, VUE, PWA'S, HTTP/2, NGINX, LINUX, SERVICE WORKERS & WEB PERFORMANCE.

OBJECTIVE

Web Engineer looking for a fast-paced environment covering a wide variety of web technologies.

SKILLS

Laravel. Debian. Ubuntu. Vue.JS. NGINX. REST APIs. MySQL. PostgreSQL. DigitalOcean. PowerShell. Docker. Angular. Firebase.

Interests

All types of music have always been an interest of mine. Though I don't play an instrument, I'm an avid listener. Programming, of course, is a large interest, which is why my chosen career is such a joy. I do enjoy cooking & baking and I am quite good at it (though, my family may disagree).

EXPERIENCE

LARAVEL CONTRACTOR • ENVIRONMENTAL360 • APR 2022 – PRESENT
Working with Environmental 360 as a contractor, I was tasked with creating new features (both for web & Android via API endpoints), fixing bugs and advising on infrastructure and system design. Primarily using Laravel & jQuery, I also implemented new features utilizing VueJS.

LEAD TECHNICAL ENGINEER • [REDACTED] • JAN 2019 – JAN 2022
[Company] approached me for a complete rebuild of their patient medical records system. I rebuilt this system from scratch (using Laravel).

NODEJS CONTRACTOR • FRAMEWORK • AUG 2020 – APR 2021
My time at Framework has been spent working purely on an IoT Infusion Pump. The pump connected to WIFI and was able to display pressure readings from the Infusion Pump along with alarms (i.e., single bubble alarms & occlusion alarms) and other core data relating to the infusion. This was built from scratch using NodeJS.

LARAVEL/VUE DEVELOPER • RIGHTMESSAGE • JUL 2018 – SEP 2018
I worked with RightMessage on their personalization/segmentation editor. RightMessage combines data from ESPs/CRMs, on-site behavior, and survey responses to deliver fully personalized experiences on client websites.
